

## Post COVID-19 Optimized Implant Supply Chain

Together, we are facing a truly unprecedented situation. The Covid-19 pandemic is affecting all of our families, our businesses, our communities, and our way of life. Our hearts go out to anyone who has been impacted by the virus, either directly or indirectly. We are genuinely inspired by the selfless healthcare workers and medical staff who are on the front lines working tirelessly to care for people in need.

Surgery Exchange is here to help you meet constraints related to post-pandemic operating requirements:

- **Reduce foot traffic** to hospital premises by shifting to an electronic collaborative work environment for all case stakeholders, including suppliers.
- **Minimize touchpoints** creating fewer people-to-people interaction while increasing efficiency, productivity, and visibility.
- **Ensure physician support** for product availability to meet the demands of an increased number of implant surgeries by providing manufacturers real-time visibility to scheduled cases and case usage to plan product availability and distribution.
- **Maximize revenue and financial targets** by proactively enforcing contract compliance before, during, and after surgery.
- **Electronically deliver purchase orders** to manufacturers to allow them to expedite inventory to cash.

During this pandemic, Surgery Exchange remains focused on your success. We have devised an **emergency implementation plan** to rapidly implement the Surgery Exchange solution with limited IT resources to help healthcare providers and manufacturers put into place systems that meet these post-pandemic requirements.

Through the **Surgery Exchange Platform™**, providers can automate manual processes throughout the implant case lifecycle, create an electronic collaborative environment for all case stakeholders including suppliers, proactively enforce vendor contracts, support central sterile with case tray and set requirements, and collect real-time normalized and actionable case-level data systemwide. **Surgery Exchange Logistics™** helps provider and manufacturer control owned and consigned implant inventory, optimize implant and tray stocking levels, and provide visibility to inventory across the entire health system. **Surgery Exchange Network™** brings device manufacturers and healthcare providers together to significantly improve their mutual operational and financial results through advanced surgery schedule, procedure demand planning, real-time case usage, rapid purchase order delivery, visibility to consigned inventory, and more.
